

Please use this guide to select appropriate decorative fixtures for your project. If in doubt, take this document to your local lighting showroom and ask for suggestions.

Notes:

- Match color temperature to fixture schedule and adjacent fixtures.
- Coordinate driver type with controls integrator for 1% dimming.
- Coordinate mounting type and requirements with electrician.
- Finish color selections by client.
- Photos below are stylistic examples only.

**Description:**

The simple exterior wall sconce is primarily for illuminating the ground and minimizing nighttime glare. While a very small amount of fixture glow may be acceptable, nearly all light should be directed down. No lamps should be visible.

Size:

Approximate diameter should be between 14-18".

Lamping:

A single exterior-rated LED frosted lamp or light source will be best. See fixture schedule for recommended color temperature and additional details. Dimming is strongly encouraged.
